

If I could find instant weather on the FM or AM dial, then the radio stations would have a point, however I would have to wait until its convenient for them, which means after commercials and all their other programming. By the time I actually get the traffic report I would likely be beyond a "point of no return." In fact, not only should you REJECT the NAB's petition 04-160, you should subscribe to XM yourself!!! It's great!!
